Architecture of a modern wind turbine - Wind Energy Architecture of a Modern Wind Turbine Many developments and improvements have taken place since the commercialisation of wind technology in the early 1980s.

Windmill - Wikipedia A windmill is a mill that converts the energy of wind into rotational energy by means of vanes called sails or blades. Centuries ago, windmills usually were used to mill grain, pump water, or both. The majority of modern windmills take the form of wind turbines used to generate electricity, or windpumps used to pump water, either for land drainage or to extract groundwater. Working with Wind Energy - TryEngineering Working with Wind Energy Page 1 of 14 Developed by IEEE as part of ... Student teams design and build a working windmill out of everyday products and learn.
